**Some of the language seems ill fit  
to capture the nuance of what we  
are trying to accomplish.**

I started to chafe at “synchronous/asynchronous” as the  
defining framework and I couldn’t figure out why.

# Synchronous Asynchronous

describes what teachers are doing, not what students  
are learning or what skills they are developing.

Students  
don't learn  
synchronously or  
asynchronously.

## Out of the Silos

---

Synchronous and asynchronous are not only confining as silos to describe online teaching practice, but the limits they create may limit novice online teachers in particular from developing the complete toolbox they will need to be effective in online or in hybrid classes.

# ELASTIC PROXIMITY

Teacher makes decisions about delivery, student guidance, and student skill development based on the ideal proximity of:

- teacher to students
- students to other students
- individual students to the teacher

**Asynchronous**

**In face-to-face, remote, and hybrid environments, we should think of teaching as a spectrum and not a 'this' or 'that' choice.**

**Synchronous**

---

**Don't think first about  
the approach you  
want to use—  
(synchronous or  
asynchronous.)**

**INSTEAD**

**Think about the  
learning need you  
are trying to meet.**

**What do we want students to know?**  
**What do we want them to be able to do?**

**(These are not new questions)**

**What PROXIMITY to the  
learning and the learner  
do you need to best  
serve their progress and  
skill growth?**

Focus on students first rather than a '*this way*' or '*that way*' idea of what the teacher will be doing.

**Teaching strategies become ELASTIC based on student learning and skill development needs.**

ENGAGEMENT CYCLE

**What does  
Elastic Proximity  
look like?**

# Diagram Grouping Strategies

We have been paying attention to how schools are evolving and we are in constant communication with teachers who are describing their experience of trying to recreate in-person classroom groupings in the remote space

**Teacher**

**Student**

# ELASTIC PROXIMITY

Teacher makes decisions about delivery, student guidance, and student skill development based on the ideal proximity of:

- teacher to students
- students to other students
- individual students to the teacher

# Where is the teacher proximate to the learning?

Direct Instruction

Student as Teacher

**At the beginning of distance learning (panic/survival mode)...**  
**“How can I at least do direct instruction?”**

What we hoped for (minimum)

## What it looked like.

## If there is no evidence of student presence...

Watch this video and then fill out and submit this worksheet  
(asynchronous - elastic is stretched as far as it can go)

# What do we want students to know?

Fragments of content.

# What do we want them to be able to do?

Be obedient.

# What we mean by “Elastic.”

**Our value can be  
deeper than this.**

**“How might we recreate  
more of our in-person  
classroom value in our  
distance learning program?”**

**–Teachers**

## **TWO EXAMPLES:**

**Grouping strategies work both in-person and in remote learning. How might we move from a deficit model to potentially create something better?**

**(I'm about to show you a couple samples I believe are better as a result of remote learning.)**

**ENGAGEMENT CYCLE**

**STUDENT LEARNING AND  
SKILL DEVELOPMENT**

**Synchronous and  
Asynchronous can be  
fluid relationship.**

**We have a *sphere* of teaching  
opportunities available to us that  
allow us to keep learning and skill  
development at the center.**

**Students learn and grow...and they  
learn and grow in **varied proximity** to  
teachers and to each other.**
